-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-3 and 8-10 are rejected under 35 U.S.C. 102(a) as being anticipated by Culpepper et al (6,396,252).

Culpepper et al discloses a DC-DC converter, comprising: a first switching element (N1) having a first terminal to which a first voltage is supplied and a second terminal which is connected to an output node; a second switching element (N2) having a first terminal which is connected to the output node and a second terminal to which a second voltage lower than the first voltage is supplied ; a feedback circuit/detection circuit (10, 11, 106, 107) which compares a voltage of the output node with a reference voltage so as to generate a first control signal, wherein the feedback circuit outputs the first control signal; and a control circuit (8, 108, 90, 91) to which the first control signal is inputted and which controls a second control signal (DRV1) to be outputted to a control terminal of the first switching element and a third control signal (DRV2) to be outputted to a control terminal of the second switching element based on the first control signal so as to control on/off states of the first switching element and the second switching element, wherein the control circuit switches the second switching element from the off state to the on state after detecting that the first switching element is in the off state when switching the second switching element from the off state to the on state (see figure 2).

Allowable Subject Matter

3. Claims 4-7 and 11-14 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
